

Practical 2

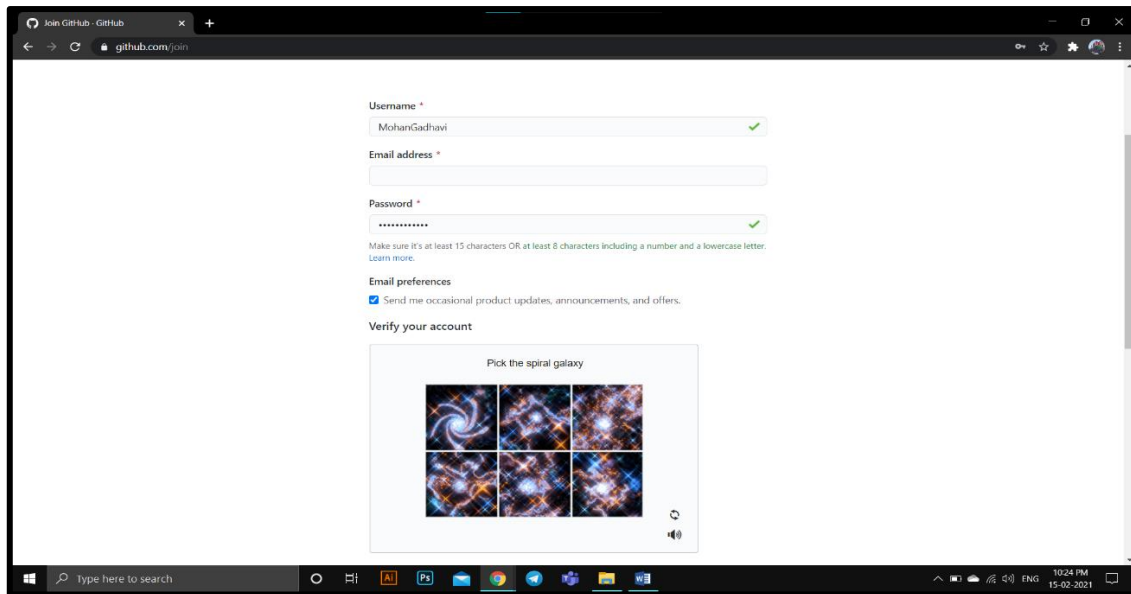

Creating account, repository on Github and Cloning repository in Github.

a) Creating Account:

Step 1: Go to <https://github.com/join> in a web browser. You can use any web browser on your computer, phone or tablet to join.

Step 2: Enter your personal details and complete the CAPTCHA puzzle.

The screenshot shows the GitHub join page in a web browser. The form includes fields for Username (filled with 'MohanGadhavi'), Email address, and Password (filled with '*****'). There is a CAPTCHA section titled 'Verify your account' with the instruction 'Pick the spiral galaxy' and a grid of six galaxy images. Below the CAPTCHA is a checkbox for email preferences, which is checked. The browser's taskbar at the bottom shows various application icons and the system clock indicating 10:24 PM on 15-02-2021.

Verify your account

Pick the spiral galaxy

10:24 PM 15-02-2021

Step 3: Click the 'Create account' button below the form.

The screenshot shows the GitHub join page after the registration form. A large green checkmark is displayed in the center of the page, indicating successful verification. Below the checkmark is a blue button labeled 'Create account'. At the bottom of the page, there is a footer with the GitHub logo and a grid of links for Product, Platform, Support, and Company. The browser's taskbar at the bottom shows various application icons and the system clock indicating 10:25 PM on 15-02-2021.

10:25 PM 15-02-2021

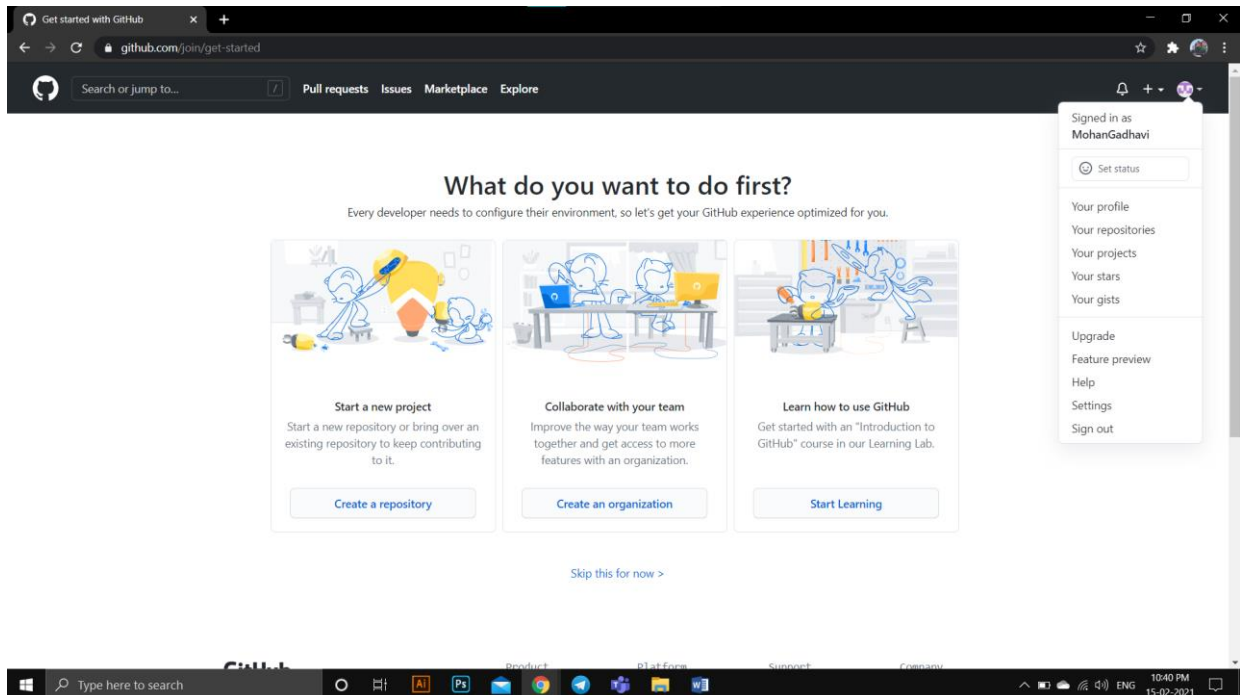

Step 4: Select your preferences and click on 'Complete Setup'.

Step 5: Verify your email. This confirms your email address and returns you to sign up process.

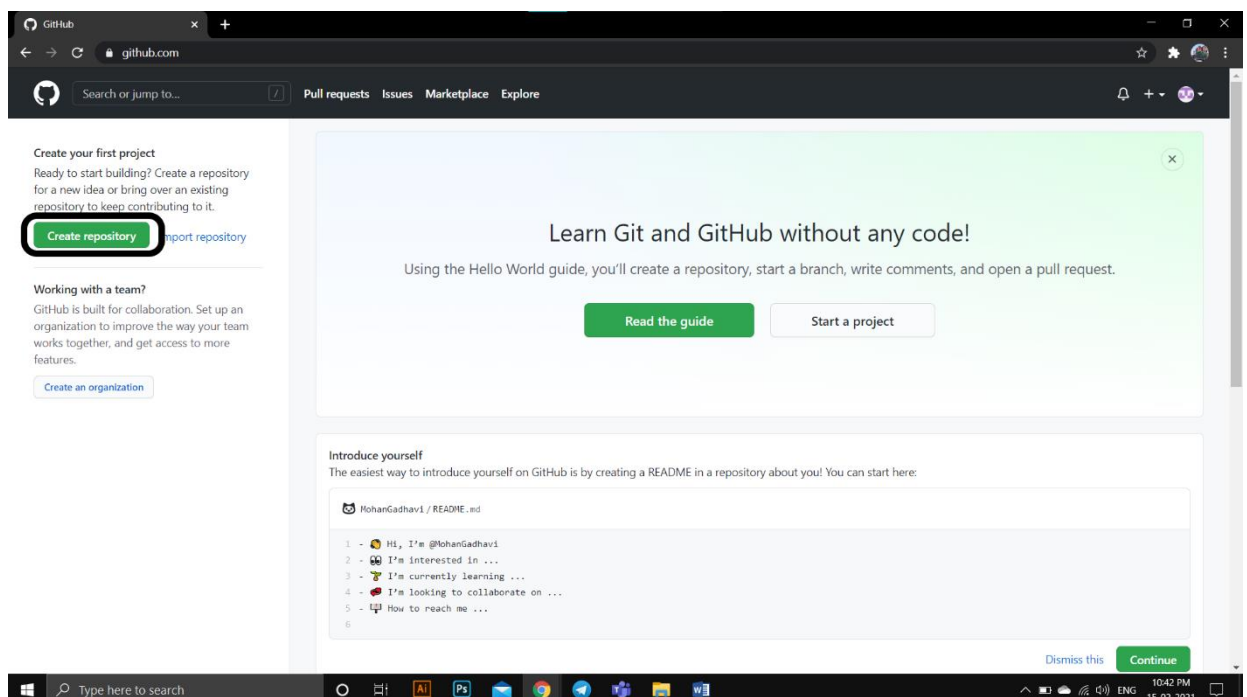

Step 6: After the email verification the account will be created. The below page will appear once the account is created.

b) Creating Repository:

Step 1: Click on the 'Create Repository' button given on the left side.

Step 2: Fill the details and click on the ‘Create repository’ button below.

Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere?
[Import a repository.](#)

Owner * MohanGadhavi Repository name * IT Tool

Great repository names are short, lowercase, and don't contain spaces. Your new repository will be created as IT-Tool. about turbo-parakeet?

Description (optional)

☒ Public
Anyone on the internet can see this repository. You choose who can commit.

☐ Private
You choose who can see and commit to this repository.

Initialize this repository with:
Skip this step if you're importing an existing repository.

☐ Add a README file
This is where you can write a long description for your project. [Learn more.](#)

☐ Add .gitignore
Choose which files not to track from a list of templates. [Learn more.](#)

☐ Choose a license
A license tells others what they can and can't do with your code. [Learn more.](#)

Step 3: You can also create or upload files in your repository from your system as given below.

Quick setup — if you've done this kind of thing before

Set up in Desktop or HTTPS SSH <https://github.com/MohanGadhavi/IT-Tool.git>

Get started by creating a new file or uploading an existing file. We recommend every repository include a README, LICENSE, and .gitignore.

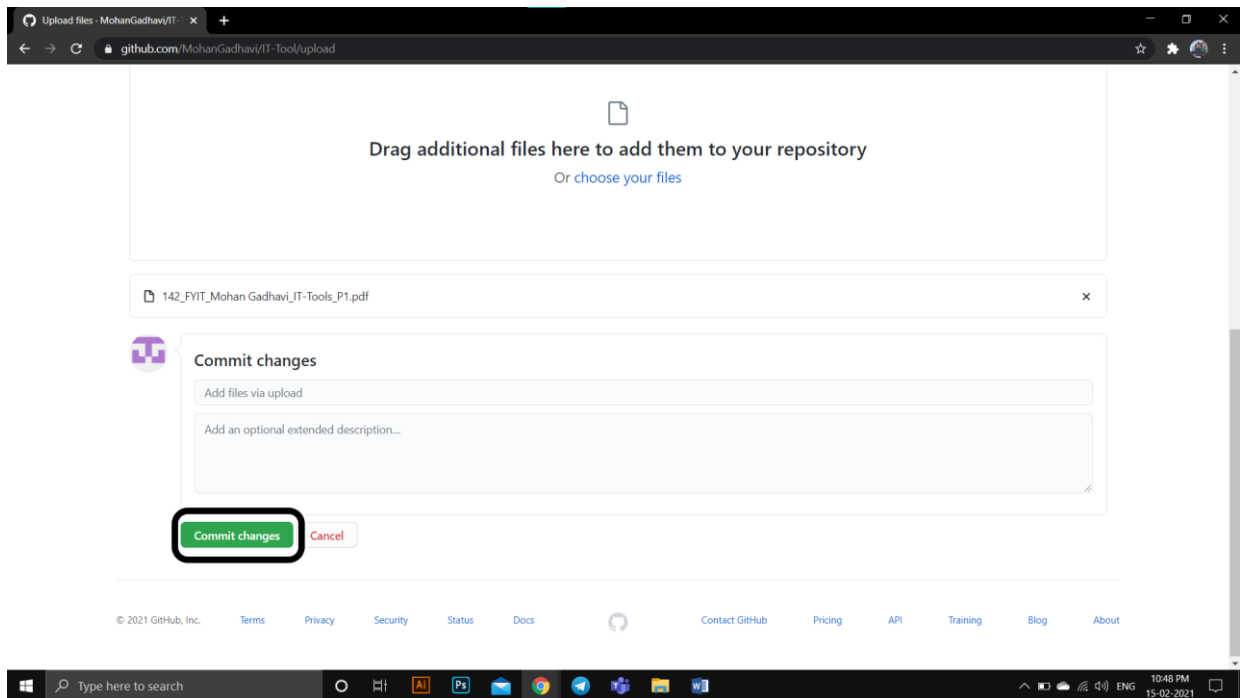

...or create a new repository on the command line

```
echo "# IT-Tool" >> README.md
git init
git add README.md
git commit -m "first commit"
git branch -M main
git remote add origin https://github.com/MohanGadhavi/IT-Tool.git
git push -u origin main
```

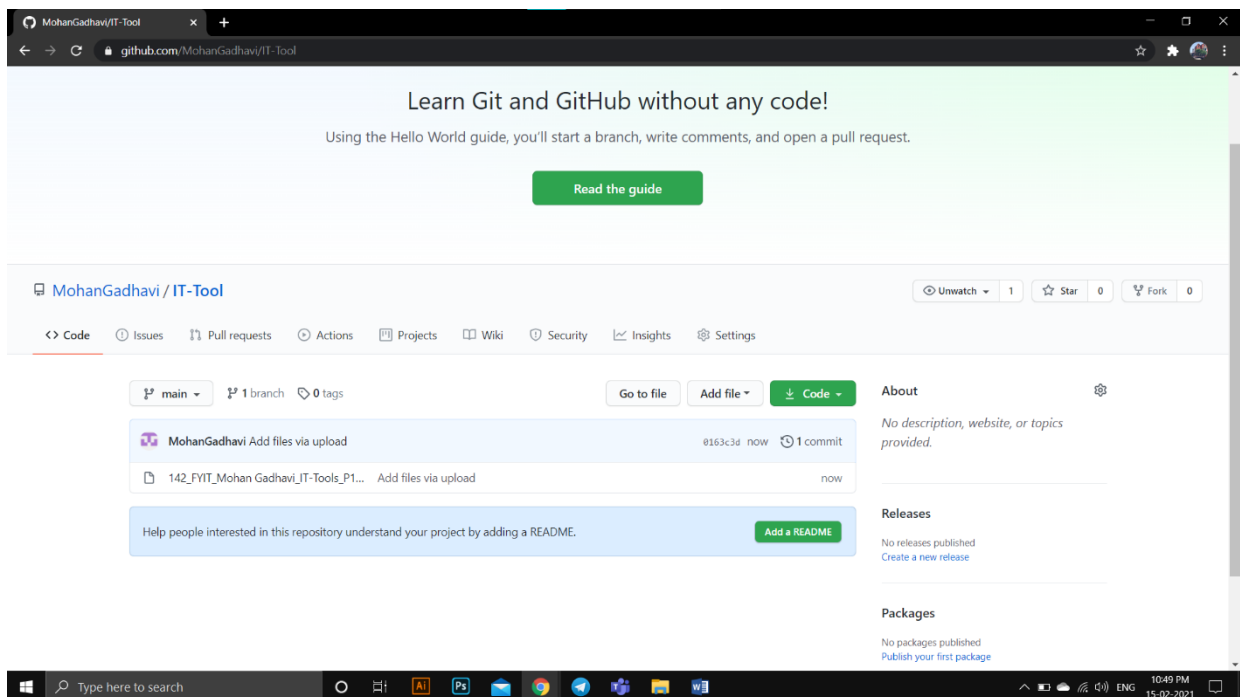

...or push an existing repository from the command line

```
git remote add origin https://github.com/MohanGadhavi/IT-Tool.git
git branch -M main
git push -u origin main
```

Step 4: After uploading files click on the ‘Commit changes’ button.

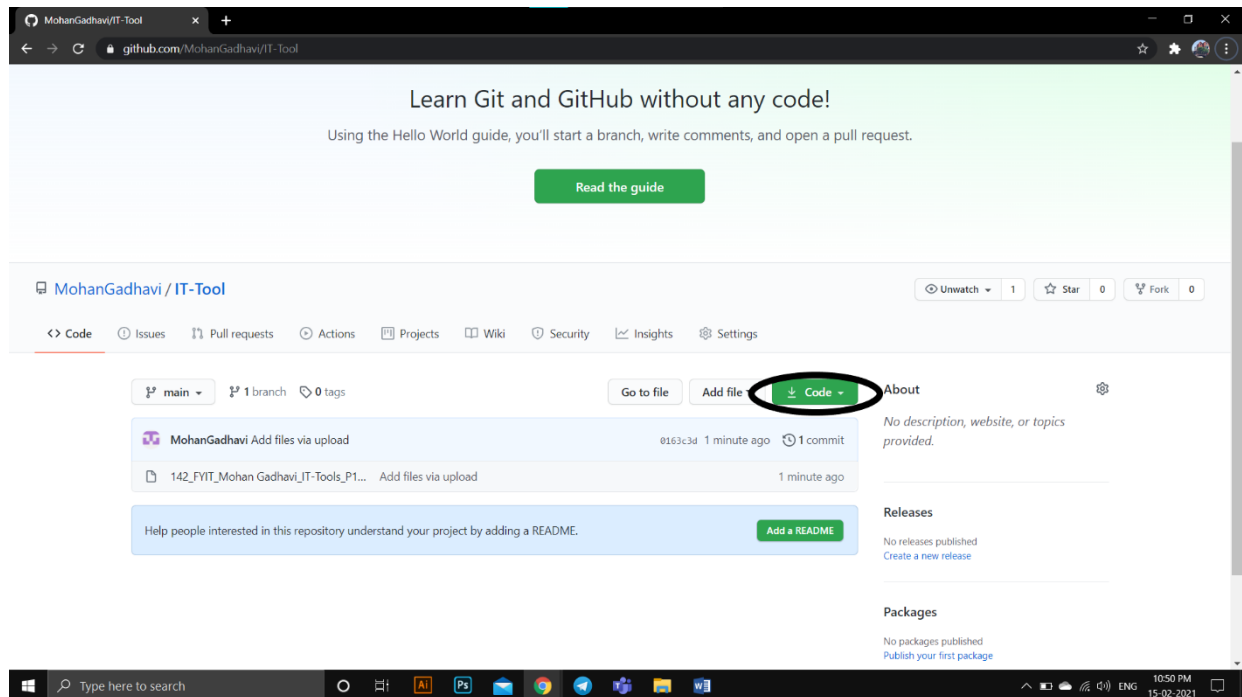

Step 4: Now the repository has been created as you can see below.

c) Cloning Repository:

Step 1: Click on the ‘Code’ button as mentioned below.

Step 2: Click on the clipboard icon as mentioned to copy the url. It will create a clone of your repository.
